CAREER OBJECTIVE

Software Engineering student proficient in Python and OOP principles, with a solid foundation in Computer Science and MySQL database management. Dedicated to building scalable, data-driven solutions and contributing analytical rigor to innovative, collaborative engineering teams.

EDUCATION

VIT University

Integrated MTech in Software Engineering – CGPA: 7.71

2021 – 2026

Islamiah Higher Secondary School

Higher Secondary (12th Grade) – 82.2%

2020 – 2021

TECHNICAL SKILLS

Languages	: Python, Java, HTML, CSS, JavaScript.
Databases	: MySQL, MongoDB.
Tools & Platforms	: Git, GitHub, Visual Studio Code, Google Colab, MS Office.
Operating Systems	: Windows, Linux.
Spoken Languages	: English, Tamil.

PROJECTS

Malaria Cell Detection Using Depth-wise Separable Layer | Python | CNN | TensorFlow | [link](#)

- Developed a high-accuracy malaria detection system using a Depthwise Separable Convolutional Neural Network, achieving 95.5% test accuracy.
- Built an interactive interface with Streamlit, allowing users to upload blood smear images for real-time.
- Benchmarked multiple architectures, surpassing performance of ResNet50 (93.4%), Stacked CNN (93.3%), and InceptionV3 (92.1%).

Blood Bank Management | Python | FIFO | OOPs | [link](#)

- Built a reliable blood tracking system using Python to manage donor records and live stock levels efficiently.
- Developed a smart matching feature that automatically checks blood type compatibility to ensure patient safety.
- Demonstrated a simple Command Line-based interface with automated data saving to keep records secure and easy to access.

Farm Oasis : A Grocery Shop | Figma | UI | APP Design | prototype | [link](#)

- Designed a seamless e-commerce platform for agricultural products, enabling users to browse, filter, and purchase farm-fresh goods through a streamlined mobile interface.
- Created a high-conversion product catalog featuring high-quality visuals and intuitive category navigation to help users find specific farming essentials quickly.

Hospital Management System | HTML | CSS | JavaScript | python | MongoDB | [Link](#)

- Built a full-stack hospital system using FastAPI and MongoDB to centralize patient records, doctor workflows, and administrative tasks.
- Developed a secure RBAC system with JWT and bcrypt to manage custom dashboards and data permissions for patients, doctors, and admins.

CERTIFICATIONS

- [Azure Data Fundamentals](#) | Microsoft
- [Python](#) | Hacker rank
- [SQL](#) | Hacker rank
- [Figma](#) | Udemy
- [AI Fluency](#) | Anthropic

ADDITIONAL INFORMATION

Interest : Exploring in AI pair programming and collaborative team adaptation, focused on optimizing development workflow through the strategic integration of generative AI.
